The Bibliotheca Alexandrina is a major library and cultural center located on the shore of the Mediterranean Sea in the Egyptian city of Alexandria. Bibliotheca Alexandrina is a striking piece of high tech architecture built to commemorate the revival of the Ancient library of Alexandria.

The project was financed by Unesco and was designed by a Norwegian Architect company called Snohetta. The construction was done by the joint venture of Balfour Beatty and Arab Contractors. The construction started in 1995 and was completed in 2002.
Haz Metal has supplied the Bibliotheca Alexandrina project in Alexandria with stone fixing systems.

The facade of this very prestigious project has a unique design made out of slit granite panels with 20 cm thickness. Each panel weighed around 1.5 tons and were fixed with special designed anchors.

All fixings were designed and produced by Haz Metal. The external facade was granite and the internal walls were cladded with prefabricated concrete panels.
